

Akhil K

Lead Frontend Engineer | Frontend Architecture | Full Stack

akhilk4k@gmail.com | +91-9567706055 | Malappuram, Kerala, India | linkedin.com/in/akhiakl | github.com/akhiakl

Summary

Senior frontend engineer with 8+ years building scalable web platforms for enterprise and commerce products. Deep expertise in React, TypeScript, and Node.js, with a strong focus on frontend architecture, design systems, and API integration patterns. Experienced leading teams, defining engineering standards, and designing systems that scale across distributed teams. Comfortable working across the full stack and making architectural decisions that balance speed with long-term maintainability.

Key focus areas: frontend architecture | commerce platforms (Shopify, Magento) | design systems | scalable web applications

Skills

Frontend	React, Next.js, TypeScript, JavaScript (ES6+), Angular, SSR/ISR, Component Architecture, Design Systems, Redux, MobX, Context API
Backend	Node.js, Express, NestJS, BFF Architecture, Middleware Design
APIs	GraphQL, REST, API Design, Service Integration Patterns
Commerce & CMS	Shopify (Storefront & Admin APIs), Magento, Vue Storefront, Contentful, Builder.io
Databases	PostgreSQL, MySQL, MongoDB, DocumentDB
Tooling	Docker, GitHub Actions, CI/CD Pipelines, Webpack, Turborepo
Practices	System Design, Frontend Performance, Accessibility (WCAG 2.1), Code Review, Mentoring

Experience

Publicis Sapient

Lead Experience Engineer

Jun 2023 – Present

Remote, India

- Designed the frontend architecture for a multi-team commerce platform built with React, Next.js, and TypeScript — supporting multiple storefronts and used across 5+ parallel engineering teams.
- Built a microservice-based middleware layer in Node.js that sits between Shopify APIs and the frontend, decoupling platform logic and enabling teams to evolve independently.
- Defined shared component library and design system standards that reduced UI duplication across teams and accelerated feature delivery across multiple storefront applications.
- Defined consistent integration patterns for REST and GraphQL APIs, simplifying data flow and improving maintainability across services.
- Led architecture reviews and set engineering standards that improved code quality and long-term platform stability.
- Mentored 4+ frontend engineers and led architectural reviews across multiple teams, raising the overall quality of frontend engineering practices.
- Collaborated with backend, DevOps, and product teams to align system boundaries, API contracts, and deployment workflows.

Corra

Frontend Lead

Jan 2022 – May 2023

Remote, India

- Led frontend development for enterprise commerce platforms serving multiple brands across a shared React code-base.
- Designed a BFF (Backend-for-Frontend) integration layer that simplified communication between the frontend and legacy backend systems.
- Built a multi-brand theming architecture that allowed independent storefronts to share core platform logic without code duplication.
- Defined API contracts and deployment workflows in collaboration with backend and DevOps teams.
- Contributed to architectural decisions for modernizing legacy frontend systems, balancing delivery timelines with sustainable architecture.

Bititude Technologies

Full Stack Developer

Aug 2017 – Dec 2021

Kochi, India

- Built full stack web applications for healthcare, SaaS, and operations products using React, Angular, Node.js,

and Express.

- Developed REST APIs and backend services supporting data-heavy dashboards and operational platforms.
- Designed database schemas across PostgreSQL, MySQL, and MongoDB for product-level features.
- Implemented modular frontend architectures focused on reusability and long-term maintainability.
- Worked end-to-end across frontend, backend, and infrastructure layers to ship product features independently.

Architecture Highlights

- **Shopify Middleware Layer:** Designed a Node.js microservice layer that abstracts all Shopify API interaction — storefront queries, cart logic, and order management — from the frontend. Enabled frontend and backend teams to evolve independently without breaking integrations.
- **Multi-brand Theming System:** Architected a shared React platform supporting multiple storefronts with distinct branding. Isolated brand-specific config at the theme layer while keeping core logic shared — reduced duplication across 4+ storefronts.
- **BFF Pattern for Legacy Modernisation:** Built a Backend-for-Frontend layer to simplify data flow between a React SPA and fragmented legacy APIs, improving frontend developer experience and reducing coupling.
- **Design System & Component Library:** Established a shared component library and visual design system for a large engineering team. Reduced inconsistency across UIs and shortened time-to-ship for new features.

Education

B.Tech in Computer Science and Engineering

Cochin University of Science and Technology (CUSAT), Kerala, India
